

Assignment: 06

Aim: Demonstrate uses of include and require in PHP.

Code:

```
<html>

<head></head>

<body>

    <?php include 'variable.php';

        echo '=> This is my favourite color <br>';

        echo 'Above file is example of include<br>';

    ?>

    <?php require 'colorfile.php';

        echo $color.'=> This is my favourite color <br>';

        echo 'Above file is example of require <br>';

    ?>
```

<!-- Use require when the file is required by the application.

Use include when the file is not required and application should continue when file is not found. -->

```
</body>

</html>
```

Variable.php:

```
<html>

  <head></head>

  <body>

    <?php

      echo 'Blue';

    ?>

  </body>

</html>
```

Colorfile.php:

```
<html>

  <head></head>

  <body>

    <?php

      $color = 'Red';

    ?>

  </body>

</html>
```

Output:

Blue => This is my favourite color
Above file is example of include
Red => This is my favourite color
Above file is example of require
