Assignment : 14

(a)Write a PHP code to demonstrate $GET $POST and $REQUEST(Use login example)

Code :-

GET METHOD :-

```
<html>
    <head><title>Validate User</title></head>
    <body>
        <form>
        <p>
            <b>Username:</b><input type="text" name="uname">
        </p>

        <p>
            <b>Password: </b><input type="text" name="pass">
        </p>
        <p><input type="submit" name="submit" /><p>

        <?php
            if(isset($_GET['submit'])){
                $username=$_GET['uname'];
                $password=$_GET['pass'];
                if($username=="drashti" && $password=="2119"){
                    echo "Valid user.";
                }
                else{
                    echo "Invalid user!";
                }
            }
        ?>
    </form>
    </body>
</html>
```

Output:-

Username: [   ]

Password: [   ]

[Submit]

Valid user.

POST METHOD :-

CODE:-

```php
<!DOCTYPE html>
<html>
<head>
</head>

<body style="background-color:lightgray;">
    <form method='POST'>
    <p>
        <b>Username:</b><input type="text" name="name"/>
    </p>
    <p>
        <b>Password: </b><input type="text" name="password"/>
    </p>
    <p>
      <input type="submit" name="submit" value="Submit" />
    </form>

    <?php

        if(isset($_POST['submit'])){
            $Name=$_POST['name'];
            $Password=$_POST['password'];
            $operator = $_POST['submit'];
            if($Name=="suru" && $Password=="135"){
                echo "Valid user.";
            }
            else{
                echo "Invalid user!";
            }
        }
```

```
    ?>

</body>

</html>
```

OUTPUT:-

Username: [   ]

Password: [   ]

[Submit]

REQUEST METHOD :-

CODE :-

```html
<!DOCTYPE html>

<html>

<head>

</head>

<body style="background-color:lightgreen;">

  <form method='POST'>

  <p>

    <b>Username:</b><input type="text" name="name"/>

  </p>

  <p>

    <b>Password: </b><input type="text" name="password"/>
```

```
    </p>
    <p>
     <input type="submit" name="submit" value="Submit" />
    </form>

    <?php

      if(isset($_REQUEST['submit'])){

        $Name=$_REQUEST['name'];

        $Password=$_REQUEST['password'];

        $operator = $_REQUEST['submit'];

        if($Name=="suru" && $Password=="135"){

          echo "Valid user.";

        }

        else{

          echo "Invalid user!";

        }

      }

    ?>

  </body>

  </html>
```
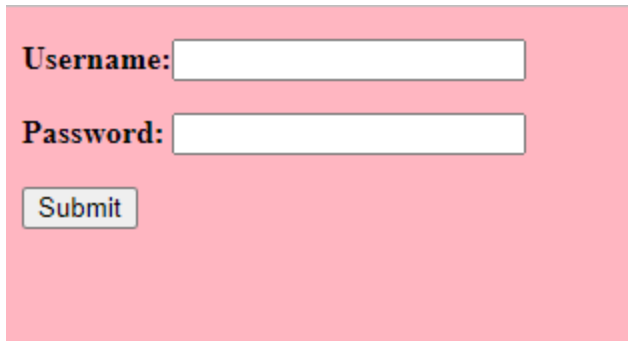

OUTPUT :-

(c)Write a PHP code to check if person is eligible for vote or not using form.

Code:-

```php
<!DOCTYPE html>
<html>
<head>
    <title>Eligible to Vote or not</title>
</head>
<body>
<form action="" method="post">
    Enter a no :
    <input type="text" name="t1" placeholder="Enter a number">
    <br><input type="submit" name="submit" value="submit">
</form>
<?php
if (isset($_POST['submit'])) {
    vote();
}
function vote()    {
    $a = $_POST['t1'];
    intval($a);
    if($a>=18){
    echo "You are Eligible for Vote";
    }
    else{
    echo "You are not Eligible for Vote";
    }
}
```

```
?>
</body>

</html>
```

Output :-

Enter a no : [Enter a number]

[submit]

You are Eligible for Vote
